

## Why switch to our compostable Coffee Cups ?

Our Eco paper cups are produced in an environmentally responsible way.

Unlike traditional paper cups that use a petroleum-based plastic lining our cups are lined with a bioplastic lining (Ingeo) (PLA) derived from corn starch.

The production of PLA emits fewer greenhouse gas emissions when compared to conventional plastic production.

The paper used to produce our cups is sourced from managed plantations that are FSA certified.

Together, we can make a difference one cup at a time.

Our cups are compostable in a **commercial compost facility**; however **this option is not widely available in Canada yet but developing fast.**

**If our cups end up in landfill, it still has upstream environmental benefits, such as reduced greenhouse gas emissions and reduced dependence on fossil fuels.**

To gain maximum advantage though, the compost bin is the recommended destination, completing a cycle by enriching the earth that helped produce it. For those concerned about the environment, it's a happy ending for a cup that's just beginning to make its mark on the world.

Insulated eco hot cup.  
No sleeve needed.  
8oz, 12oz 16oz

Eco hot cup  
Available in :  
4,8,10,12,16 & 20 oz
