

Why switch to our plant based cold cups?

Our plant-based cold cups have the same look and feel as traditional plastic cups. However PLA cold cups are made from Ingeo, a renewable plant-based plastic that is 100% derived from corn, and other plants, not oil.

PLA bioplastic requires 68% fewer fossil fuel resources to produce than traditional plastic.

Our clear cups can be composted in commercial compost facilities, however this option is not widely available in Canada but emerging fast.

If the cup ends up in a landfill, it still has upstream environmental benefits, such as reduced greenhouse gas emissions and reduced dependence on fossil fuels.

To gain maximum advantage though, the compost bin is the recommended destination, completing a cycle by enriching the earth that helped produce it.

- Made from plants, not oil
Compostable in a commercial compost facility in as little as 45 days
- Custom branding available (min 50 000 units)
- Universal fit dome and flat lids (300ml to 700ml)
- Reduced storage space requirements

Available in: 5,7,12,16,20,24 oz Lid fits : 12-24 oz and small lid fits : 5-7 oz
