

Why switch to our deli containers?

The unique blend of physical properties of Ingeo™ biopolymer makes it well suited for rigid thermoformed food and beverage containers.

Coupled with its unique environmental attributes, it is the only packaging material with significantly reduced greenhouse gas emissions to combine performance with environmental benefits.

Our deli containers can be composted in an commercial compost facility, however this option is not widely available in Canada yet evolving fast

If the product ends up in landfill, it still has upstream environmental benefits, such as reduced greenhouse gas emissions and reduced dependence on fossil fuels.

To gain maximum advantage though, the compost bin is the recommended destination, completing a cycle by enriching the earth that helped produce it.

Eco ware clear PLA containers provide the following attributes:

- Stiffness
- Transparency
- Flavor and odor barrier
- Anti-fogging characteristics
- Grease and oil resistance
- The inherent stiffness of NatureWorks polymer also allows containers to be down gauged compared to polystyrene containers.

Available in: 2 oz, 8oz,12oz,16oz,32oz

Lid fits 8-32 oz
