

## Why switch to our compostable sugarcane fiber ( Bagasse ) to go boxes ?

Our broad range of biodegradable plates, platters, bowls, trays and containers are manufactured from bagasse.

Bagasse is the natural by-product of sugarcane after the juice is extracted from the cane. Rather than going to waste, we process the bagasse material and mold it into heavy weight, high quality tableware.

We remain committed to delivering innovative eco-friendly products to the food service industry through our ongoing research.

Ecoware's single-use boxes, bowls, trays and plates replace conventional polystyrene and plastic containers. The range is 100% all natural, made from annually renewable resources - Sugar Cane Pulp.

Our products are biodegradable and compostable to American standards. The products are FDA approved for food contact and our production facility complies with ISO 9001: 14001 & quality and environmental management standards.

BPI certification verifies that environmental claims have been validated by an independent 3rd party organization

Grease and cut resistant, Microwave and freezer safe

Excellent performance for hot or cold foods

Molded construction designed for strength and upscale appearance

So if you are looking for a socially responsible line of disposable plates, bowls, or containers - take a look at our line.
